Research Diary

PhD Research Journal

Author: **Annabel Jakob**

Start Date: 4 February 2026

Field: **Computer Science**

Contents

1 Resources

- DPhil Progression Information and Resources

2 04 February 2026

2.1 Research Plan

Today's main tasks:

- Meeting with Seth and Gunes
- Familiarise with DPhil milestones and progression requirements
- Reading relevant literature suggested during supervisor meeting
- Watch ATSML Lecture 2

2.2 Content Details

Meeting Summary

Meeting Notes:

- DPhil Milestones
  - Term 4, Week 0: Transfer status
  - 8th/9th Term: Confirmation of DPhil status
- Finding a research question
  - Bayesian Transformers
    - The Bayesian Geometry of Transformer Attention
    - Bayesian Transformer
    - Transformers Can Do Bayesian Inference
  - AI-assisted proofs
    - Existing tools: LEAN Proof Checker and Xena Project, Autodiff
    - Possible steps:
      1. Compile dataset of theorems presented in previous conference papers (e.g. NeurIPS)
      2. Verify the theorems and proofs in the dataset
      3. Goal: Can we produce *new* theorems and proofs?
    - Other resources:

· Aristotle: IMO-level Automated Theorem Proving

- Mechanistic interpretability
  - Potentially connected to encrypted backdoors
  - Talk to Marek and Junayed
- Statistical Machine Learning
  - DeepRV: Accelerating spatiotemporal inference with pre-trained neural priors
- Random Number Generators
  - Can a backdoor be hidden in a RNG/ induced through an RNG? I.e. malicious signal induced via carefully chosen "random" numbers?
  - Planting Undetectable Backdoors in Machine Learning Models
  - Oblivious Defense in ML Models: Backdoor Removal without Detection
